Good afternoon,

Scott and I addressed an inquiry from a resident in the Sycamore subdivision just to the south of the West Jordan City property in Clay Hollow (his name was Andrew Levesque). He wanted to know what is going to be done by Kennecott to remove the sediment with elevated arsenic. He also wanted to know about the progress of work to get the sediment removed. Lastly he wanted to know why people were being told to stay out of the area.

I commented that DOGM had issued a division directive and in reply, Kennecott submitted a work plan for removing the sediment from the West Jordan City property. I noted that DOGM, DWQ, DERR and EPA were currently evaluating the work plan and that once the review was completed, DOGM would provide Kennecott a reply. I notified Mr. Levesque that once the plan was accepted by the agencies, Kennecott would implement the response action listed.

I told him that Kennecott had fenced off the areas where soils were found to exceed the industrial land use standard of 261 mg/kg for arsenic and that they were likely taken extra precautions by asking people to leave the immediate area around the fencing. I knew Kennecott had personnel patrolling the fence line.

I will be in the office on Tuesday if you have any questions.

-Doug
